

## Seeking: A Highly Experienced Developer

### About Us:

Eneza Education aims to make 50 Million students across rural Africa smarter by using cloud computing and simple mobile technology to increase student achievement. We are making serious traction in the Edtech world with over 200,000 student users, and we are looking to hire more unreasonable people to be a part of this movement.

### Job Specs:

- Working with our core system that has already been developed
- Turning market research and user needs into great user experience
- Working with other developers to refine and manage the existing platform
- Participating in our internal labs and hackathons to constantly create and test experiments

### Requirements for the Position:

- PHP / MySQL
- HTML / CSS / Javascript
- Working both independently and within a team if need arises
- Attention to design details

It would be a bonus if you are familiar with:

- Pair programming
- Writing tests
- Git versioning
- Laravel Framework (optional - must be a fast learner though)
- Agile

Must be a dedicated, hard-working, honest individual who is passionate about education and believes in the above ideals. Good Internet Explorer jokes and love for Superman are a plus.

### Benefits:

Competitive Kenyan salary (we pay 100% more than most companies in Kenya) and possible stock options or equity.

### How to Apply:

Please send proof of awesomeness in the form of a CV **and** proof of work, e.g: portfolio links, GitHub profile, personal website, etc. Include a description of tasks for each project link you send. Send to [geeks@enezaeducation.com](mailto:geeks@enezaeducation.com). Only convincing cases will be notified.
